The background of the entire image is a detailed marble pattern. It features a light beige or off-white base color, intricately veined with dark grey and black lines. These veins are irregular and organic in shape, creating a classic, natural stone appearance. The overall texture is smooth but visually complex due to the varying thickness and direction of the veins.

UPGRADE SUPREME EVO 2021

The collection Supreme Evo was overlapping and killing the collection Supreme Wide. The world wide market related to Italian Producers is not anymore interested in 120x240 slabs because of the huge production in China, India and Russia putting highlight and appreciation for 120x278/280 slabs that now is really global. The collection Supreme Wide had already been reduced of the two less interesting colors (Exotic Brown and Black Deluxe) and after in 2021, also without updated catalogs, samples and promotion tools, it would be reduced even more. Bringing the three best colors into the Supreme Evo package, adjusting the body compound, sizes and thicknesses, the success of these products will be sure and safe. Nowadays Supreme Evo range, weak in the light colors, is riding on. So now is necessary to renew the merchandising and the information for the markets with the 120x280 that will be produced in January and then push on the new 60x120 Lux 9mm. The new serie takes the best of two series, optimizes items and production and gives greater growth opportunities than in the 2020 situation.

Furthermore, for customers, it will be even more a fundamental, prime serie on the market.
