MINERAL MARMO SOLID

It is a new generation ductile material, that is modeled by injection and allows the development of volumes and complex surfaces of application in many areas of the market: washbasins, bathtubs, floors, furniture, etc.

It is 75% natural mineral products composed (calcium carbonate and aluminium trihydrates) and 25% polyester resin. The surface hardness of this material resides in the polyester film that covers the surface so the mechanical and chemical characteristics make it suitable for the bathroom decoration and public environments.

Available in two surface finishes:

Shine - Mineral Marmo.

Mate - Mineral Solid.

MX1

CHARACTERISTICS

- Material: MineralMarmo ®.
- Composition: 75% natural minerals (calcium carbonate and aluminum trihydrates), 25% polyester resin.
- Ductil.
- Injection modeling.
- Allows complex surfaces.
- Placing on furniture.

COMPATIBILITY

- Play.
- Code.
- Code US Version.

FINISHES

It is a Mineral Solid/Marmo variant with improved resistance characteristics.

Composition 75% rock ore ground with dolomite and 25% polyester elastic resin is coated by a layer called Nancoat. Thanks to this, the product is very resistant to mechanical impact and exposure to extreme temperatures as well as having anti-bacterial properties due to its low water absorption.

Coatings of this type are also used to coat the surfaces of ship hulls, wind mill blades, etc. that is, the places exposed to continuous contact with adverse elements.

Available in two surface finishes:

Gloss - Mineral Composite Gloss.

Mate - Mineral Composite Matt.

MINERAL COMPOSITE

MX8

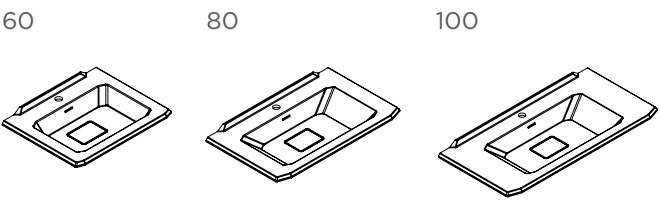

CHARACTERISTICS

- Material: Mineral Rock composite ground with dolomite. Coated with nanolayer of quartz resin.
- A tap drill. Pre-marking bottom for 3 drills.
- Integrated overflow.
- Drain 1 1/4". Compatible with click clack or fixed valve with small lid.
- Valve cover.
- Placing on furniture.

COMPATIBILITY

- Epoque

DIMENSIONS

FINISHES

MINERAL

It is another variant of Mineral Marmo/Solid in the same proportion of materials 75% of mineral components and 25% of polyester resin.

It maintains the same strength and durability performance as the previous one to a standard quality level.

Available in two surface finishes:

Gloss - Mineral Gloss.

Mate - Mineral Matt.

MX10

CHARACTERISTICS

- Material: Mineral Composite.
- A tap drill.
- Integrated overflow.
- Drain 1 1/4".
- Placing on furniture.

FINISHES

MINERAL GLOSS

MINERAL MATT

It is one of the most traditional materials in the manufacture of medical devices. Even with limited forms, ceramic is the most durable material on the market today.

With a complex and artisanal manufacturing system, ceramic paste is a natural material composed basically of clay and kaolin. During the manufacturing process both materials are added finely ground quartz and feldspar in very exact proportions.

The surface finish of this material is achieved by applying a mineral white enamel on the raw parts, and after a cooking phase of approx. 1280°, reaches its hardness and characteristic shine called vitrified. The different colours in which this material is presented have a different vitrified process. In this case we are talking about a high-strength kiln-dried paint.

A quality ceramic piece is distinguished by the uniformity in the surfaces, absence of pores, surface pinches and a uniform white finish throughout the piece.

SX7

CHARACTERISTICS

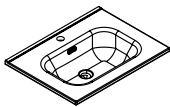

- Material: glazed ceramic.
- A tap drill.
- Overflow with chrome trim.
- Drain 1 1/4".
- Placing on furniture.

TORTORA STONE

WHITE STONE

It is a derivative of Natural Compact Stone with the same manufacturing process.

The difference is that the ground stone used is a common rock that once licked is applied the different coatings of color tones.

MICROTECH COUNTERTOPS

*Only for US market

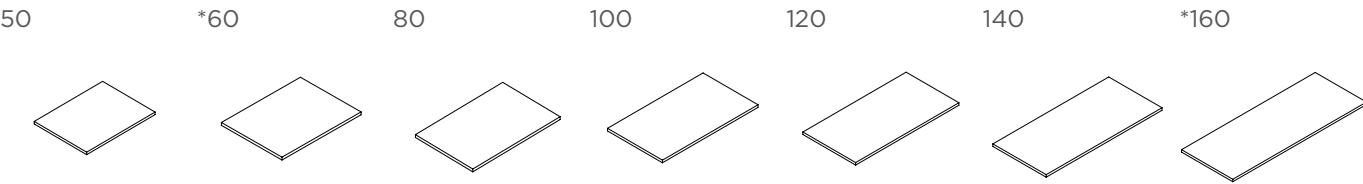

CHARACTERISTICS

- Material: Piedra compacta obtenida de roca molida natural con proceso de laminación.
- Esmaltada en diferentes colores.
- Superficie firme.
- Inalterable al contacto con el agua.

COMPATIBILITY

- SX12.

DIMENSIONS

FINISHES

COMPACT STONE

100% natural ground micro-stone from quarries composed.

The scraps of rock are crushed and then subjected to a process of compaction by rolling in different thicknesses. The resulting slabs have the tone and grain of the original matrix stone, and are cut and machined by numerical control to obtain the necessary cutting according to the design or field of application.

Subsequently, with the finished product, a treatment is applied to improve the surface performance such as waterproofness, resistance to stains or softness to the touch.

COMPACT COUNTERTOPS

*Only for US market

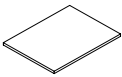

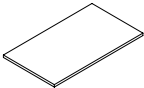

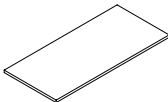

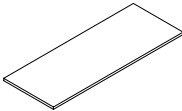

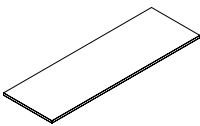

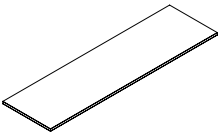

CHARACTERISTICS

- Material: 100% natural stone countertops ground and compacted.
- Firm and waterproof surface.
- Optional surface tap hole.
- To install over a base unit furniture.

COMPATIBILITY

- Evolve (SX12).
